SUMMARY

Mechatronics Engineering undergraduate specializing in industrial automation, PLC control system design, and mechanical modeling. Hands-on experience with Siemens PLCs, VFD motor control, electrical panel assembly, and CSWP certified SOLIDWORKS design. Seeking high-impact roles in industrial manufacturing and automation environments.

EDUCATION

Suez Canal University

B.Sc. in Mechatronics Engineering | (GPA : 3.2) | Expected Graduation: 2028

EXPERIENCE

Khalda Petroleum Company

Mechatronics Intern

Aug 2026 – Sep 2026

Maadi - Egypt

- Completed field-integrated training in upstream oil and gas operations, covering production facility management, well operations, and operational safety compliance.

SINAMIX (Digital Factory)

Automation Intern

July 2026 – July 2026

10th of Ramdan - Egypt

- Programmed Siemens S7-300 PLCs using TIA Portal (LAD) and configured SINAMICS G120 VFDs for motor speed control via PROFINET and Modbus protocols.
- Trained on end-to-end electrical panel building, covering sheet metal manufacturing and control cabinet layout.

MAM for Engineering Industries

Panel Building Intern

Aug 2026 – Aug 2026

Obour - Egypt

- Trained on Electrical Low-Voltage (LV) panel design, assembly and integrated mechanical-electrical components under industrial standards.

ABB

ABBBright Minds Trainee

Aug 2025 – Sep 2025

Remote

- Completed 70 technical modules focused on process automation, continuous gas analysis, and low/medium voltage distribution systems.
- Completed 8 technical interactive webinars.

PROJECTS

4-DOF Robotic Arm & Multi-Stage Gearbox

- Designed full kinematic mechanical assemblies from scratch in SOLIDWORKS, incorporating 3D printing / additive manufacturing workflows; conducted stress analysis and motion simulations to verify structural integrity.

4-Cylinder Motor Assembly

- Modeled complete internal engine components from scratch using advanced CAD tools, performing full stroke motion analysis, dynamic exploded view renders, and tolerance stacks.

Embedded QR Attendance System

- Developed a standalone C-code utility using MinGW, C++ and Arduino to automate hardware attendance tracking into structured Excel reports.
